SUMMARY

Technical solutions engineer who turned recurring customer pain points into committed R&D hours and took ownership of the Microbiology product area within a year, growing its team from 3 to 9. Primary technical contact for Epic's Beaker lab system at 3 health systems (25+ hospitals), tackling 250+ tickets across HL7v2 integrations, security failures, and cloud migrations.

PROFESSIONAL EXPERIENCE

Epic Systems

Madison, WI

Technical Solutions Engineer, Beaker (Lab Information System) — August 2024 - June 2026

- Secured dedicated R&D hours for isolate-level PCR testing and automation line integration on the Microbiology roadmap, backed by 50+ bug reports and enhancement requests filed from friction seen in production
- Took ownership of the Microbiology subject area in July 2025; recruited internally to rebuild the team from 3 to 9 solutions engineers, restructured the support model, launched documentation initiatives, and ran onboarding workshops; recognized with the leadership-selected Beaker Spirit Award
- Led Beaker TS Fun, the team's culture group, solo from Aug 2025; created the Cell Fair, where product areas recruited from ~400 customer-facing staff (helped grow Microbiology from 3 to 6), and led a 180-person team retreat
- Represented Beaker Microbiology in early partnership discussions with a national clinical laboratory standards organization alongside the Third Party Integration team, preparing POCs, demoing capabilities, and scoping requirements toward faster implementations at rural and low-resource labs
- Served as primary technical contact for Beaker LIS teams at 3 health systems spanning 25+ hospitals and 30+ clinical labs across FL, CA, MN, and ND, presenting issues, solutions, and upgrades to CMIOs, IT directors, and pathologists
- Debugged cross-team issues live on customer calls, including security misconfigurations, corrupted data, malformed HL7v2 payloads, and system latency, by writing SQL queries and database searches to isolate affected records, reproducing in non-production, then resolving directly or escalating with reproduction steps
- Embedded as senior technical resource for Beaker go-lives at 6 command centers and as extra support at 11 hospital labs; triaged incoming tickets with IT and resolved real-time escalations while floating between labs and ERs

Matrix Capital Management

Boston, MA

Summer Analyst (Life Sciences) — August 2022 - September 2022

- Conducted due diligence on proteomics companies at a $6B AUM hedge fund through field researcher interviews and financial modeling

Breakthrough Silicon Valley

San Jose, CA

Teaching Fellow — June 2022 - July 2022

- Taught 8th grade math to ~40 students and led homeroom for ~20 7th graders, supporting traditionally underrepresented students on their path to post-secondary success and becoming the next generation of empathetic leaders

PERSONAL PROJECTS

Deets.Solutions

Website | github.com/deets-137 | Native and web app portfolio, built with Claude Code — April 2026 - Present

- Built and deployed a real-time multiplayer platform on Cloudflare Workers and Durable Objects, playable at Deets.Solutions on a shared table foundation with hibernatable WebSockets, per-connection hidden state, and bots
- Built a local LLM agent harness (Python, FastAPI, WebSocket streaming) orchestrating Ollama-served models through a multi-turn tool registry with context management, bridged to a Discord bot so workflows run from chat
- Integrated third-party APIs across the portfolio, implemented OAuth with token refresh, rate-limit budgeting, and idempotent syncs - including Apple Music, Google OAuth, Notion, Discord, TMDB, and Riot via a dependency-free Riot proxy that backfills ~1,000 games per player on a budgeted cron without exceeding rate limits
- Designed DeetsMusic, a Windows Apple Music player built with Claude Code under my direction, and the release and support tooling around it: signed installers, verified auto-updates, in-app bug reporting, and a public support board; live demo at deets.solutions/deetsmusic
- Scoped an 18-tool MCP server and CLI so AI agents (Claude, Cursor, small local models) can search, queue, and control playback

EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

B.S. Computational & Systems Biology, Dynamical Modeling concentration | GPA: 3.65/4.0 — June 2024

SKILLS

- Languages: Python, R, SQL, M (MUMPS)
- Healthcare standards: HL7v2, FHIR, HIPAA
- Tools: Claude Code, ServiceNow, Jira
