SUMMARY

Technical support engineer for enterprise software, serving as primary technical contact for 3 health systems, tackling 250+ Epic Beaker tickets, and owning after-hours escalations across cloud migrations, third-party integrations, and security failures. Took ownership of the Microbiology product area, 1 of Beaker's 13 product areas, within a year, growing the technical solutions engineer team from 3 to 9 and shaping product roadmap priorities from clinical user feedback and recurring pain points.

PROFESSIONAL EXPERIENCE

Epic Systems

Madison, WI

Technical Solutions Engineer, Beaker (Lab Information System)

August 2024 - June 2026

- Served as primary technical contact for Beaker LIS teams at 3 health systems spanning 25+ hospitals and 30+ clinical labs across FL, CA, MN, and ND, presenting issues, solutions, and upgrades to CMIOs, IT directors, and pathologists
- Debugged and resolved cross-team issues live on customer calls regarding security misconfigurations, corrupted data, and malformed HL7v2 payloads by reproducing in shadow non-production environments and isolating root cause
- Resolved show-stopping after-hours escalations, including cloud migration, third-party integration, and security failures, while serving as the go-to Microbiology subject-matter expert to 3-5 customer and implementation teams weekly
- Traced user-reported latency to configuration errors overloading system components, often resolving directly, or triaging and escalating to appropriate owning team with reproduction steps
- Filed 50+ bug reports and enhancement requests to R&D documenting ideal user workflows and friction observed in production across customers
- Embedded as senior technical resource for Beaker go-lives at 6 command centers and as extra support at 11 hospital labs; triaged incoming tickets with IT and resolved real-time escalations floating between labs and emergency rooms
- Took ownership of the Microbiology subject area for Beaker in July 2025; recruited internally to rebuild the team from 3 to 9 solutions engineers, restructured the support model, and launched new development and documentation initiatives
- Championed reprioritization of isolate-level PCR testing and automation line integration on the Microbiology roadmap, translating recurring customer pain points into R&D commitments that secured dedicated development hours
- Built a retrieval-augmented (RAG) system over Microbiology development and documentation to draft first-pass responses to customer questions
- Represented Beaker Microbiology in early partnership discussions with a national clinical laboratory standards organization alongside the Third Party Integration team, preparing POCs, demoing capabilities, and scoping requirements toward faster implementations at rural and low-resource labs
- Ran technical workshops to train and bring new Technical Solutions Engineers up to speed on Microbiology

Matrix Capital Management

Boston, MA

Summer Analyst (Life Sciences)

August 2022 - September 2022

- Conducted due diligence on proteomics companies at a \$6B AUM hedge fund through field researcher interviews and financial modeling

Breakthrough Silicon Valley

San Jose, CA

Teaching Fellow

June 2022 - July 2022

- Taught 8th grade math to ~40 students and led homeroom for ~20 7th graders, supporting traditionally underrepresented students on their path to post-secondary success and becoming the next generation of empathetic leaders

EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

B.S. Computational & Systems Biology, Dynamical Modeling concentration | GPA: 3.65/4.0

June 2024

PERSONAL PROJECTS

Deets.Solutions

Website | github.com/deets-137 | Portfolio of native Windows, macOS, iOS, and Web Applications

- Built and deployed a real-time multiplayer platform on Cloudflare Workers and Durable Objects, playable at Deets.Solutions on a shared table foundation with hibernatable WebSockets, per-connection hidden state, and bots
- Built a local LLM agent harness (Python, FastAPI, WebSocket streaming) orchestrating Ollama-served models through a multi-turn tool registry with context management, bridged to a Discord bot so workflows run from chat
- Integrated third-party APIs across the portfolio, implemented OAuth with token refresh, rate-limit budgeting, and idempotent syncs - including Apple Music, Google OAuth, Notion, Discord, TMDB, and Riot via a dependency-free Riot proxy that backfills ~1,000 games per player on a budgeted cron without exceeding rate limits
- Shipped native apps across Swift/SwiftUI, Rust/Tauri, and TypeScript - including an Apple Music client for Windows with DRM playback and a live-synced gapless queue

SKILLS

- Python, R, SQL, M (MUMPS)
- Claude Code
- HL7v2, FHIR
- HIPAA
